Professional summary

I work on enterprise systems with 12 years with .NET and 9 years with C#. I translate requirements into solution designs, integration contracts and cloud delivery choices, combining hands-on development with code review and mentoring.

Relevant experience and delivered cases

Grupo MAG | Simple2U and Favela Seguros projects

Nov 2020–Oct 2021

To launch insurance products under initially uncertain demand, I served as project architect and implemented much of the solution. I extracted reusable capabilities and implemented C#/.NET services using Azure Functions and asynchronous Service Bus processing. I controlled duplicates through UUID and state checks in Cosmos DB and handled failures with DLQ and retry. I built delivery with GitHub Actions/GitLab CI, SonarQube, Dependency-Check and DAST. Shared capabilities enabled reuse across Simple2U and Favela Seguros; I observed stability in the benchmarks we monitored.

Capgemini | Client Grupo Bimbo | Azure applications

Oct 2021–May 2026 (employment period)

For Grupo Bimbo enterprise applications, I supported the evolution of .NET components on Azure AKS and Azure Functions. I contributed to technical decisions, integration, delivery and observability practices. My contribution supported application maintenance and evolution on Azure.

Sigla Construtora | Enterprise applications

May 2008–Dec 2015

For the construction company’s enterprise systems, I designed and implemented .NET/ASP.NET Web Forms applications and SOAP/WCF integrations with Oracle and SQL Server. I worked on business rules, persistence and service communication. I delivered enterprise applications and integrations supported by a service-oriented architecture.

Independent project | .NET 10 Ledger

Recent independent project

I implemented a software architecture challenge using .NET 10; the code is available on GitHub for technical review. Evidence: github.com/leandrojacome/desafio-arquiteto-software-ledger.

Current work | CodeSpec

Jun 2026–present | Full-Stack Developer | Remote

I develop backend applications and enterprise integrations using C# / .NET. I contribute to containerized delivery, automated testing and specification-driven development (SDD).

Architecture and technical leadership

At Capgemini, I translated functional and nonfunctional requirements into C4 models and technical guidance. I conducted design and code reviews and mentoring, using Clean Architecture, SOLID, DDD and resilience patterns.

Relevant engineering skills

C#, .NET, ASP.NET, .NET 8 and Minimal APIs; recent .NET 10 use. Entity Framework and CQRS; SQL Server, SOAP/WCF, Azure Functions, Service Bus, Event Grid and AKS. Automated testing, CI/CD, Terraform and Ansible.

Education

PUCPR postgraduate programs: Data Science (Apr 2024–Jun 2025); Software Architecture and Cloud Engineering (Feb 2022–Apr 2023); Cybersecurity (Jan 2021–Feb 2022). Technologist degree in Systems Analysis and Development, Senac (2020–2022); Networks and Internet, UNIP (2007–2009).

Selected certifications and languages

AWS Certified Solutions Architect – Associate; Google Associate Cloud Engineer; PSM I; PSPO I.

Portuguese: native. English: advanced, professional communication. Spanish: advanced.
